ABSTRACT: Web Accessibility refers to the inclusive practice of designing and developing websites and web applications that can be used and accessed by people of all abilities and disabilities. The goal is to ensure that everyone, including those with disabilities, can perceive, understand, navigate, and interact with the web. To achieve web accessibility, web developers and designers can follow guidelines provided by the Web Content Accessibility Guidelines (WCAG) developed by the Web Accessibility Initiative (WAI) of the World Wide Web Consortium (W3C). These guidelines provide a framework for creating accessible web content and cover a wide range of topics, including text alternatives, keyboard accessibility, time-based media, and more. By embracing web accessibility principles, businesses and organizations can create a more inclusive online environment, reaching a broader audience and ensuring that people with disabilities can participate fully in the digital world. Some of the key challenges include lack of awareness, inconsistent implementation, rapid technological changes, resource constraint, localization, content complexity, cultural nuances and legal and regulation compliances. Web-based Virtual Reality (VR) poses several accessibility challenges that can hinder users with disabilities from fully experiencing or interacting with content. Some of the key challenges include Visual Accessibility, Motor and Mobility Challenges, Auditory Accessibility, Cognitive Accessibility, Technical Requirements, Content Design and User Experience, Lack of Standards and Guidelines. Addressing these challenges requires a concerted effort from developers, designers, and VR platform providers to prioritize accessibility in their design and development processes. This includes implementing accessibility features, testing with users who have disabilities, and promoting awareness of accessibility issues within the VR community. In this project we shall be using Open-Source tools viz., Superset to visually understand the gaps in Accessibility in Web based VR applications using the Open Datasets available on the Internet.
